

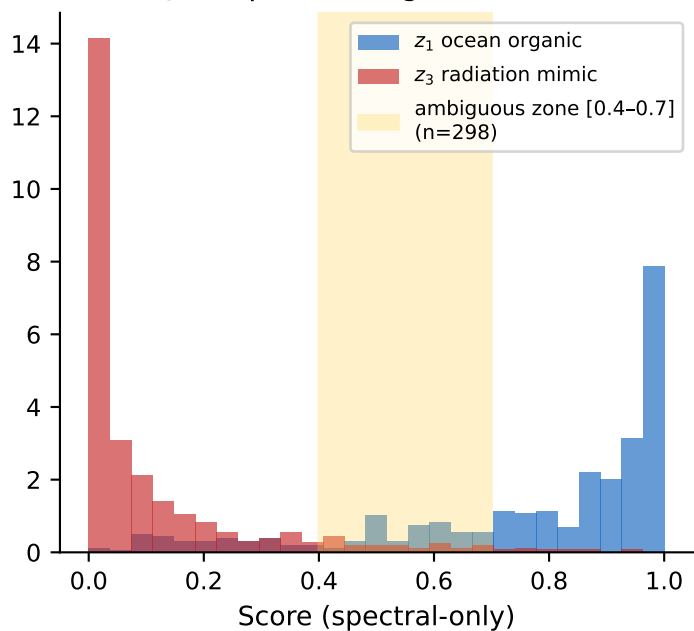

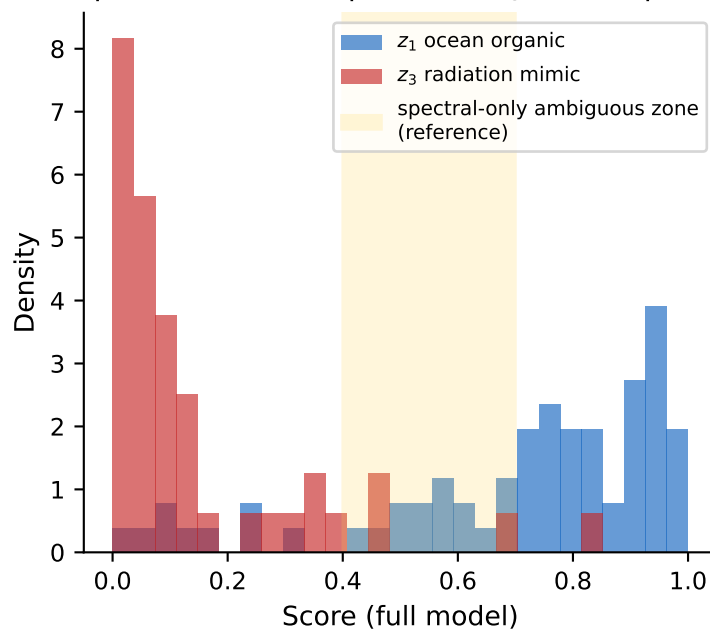

Fig. 3 — Spatial context is most effective on ambiguous candidates (spectral-only score 0.4-0.7, harsh+high-overlap condition, seed 3421)

(A) Spectral-only — full score distribution
(all z_1/z_3 samples; ambiguous zone shaded)

(B) Full model — ambiguous-subset samples re-scored
(spatial context disperses z_1/z_3 toward poles)

(C) PR curve — ambiguous subset
